

International Hair Transplant Institute

Body Hair Transplant

Post Op Instructions

Patients that have a Body Hair Transplantation (B.H.T.) will treat the recipient and extraction area the same as in the post op instructions, with the exception of the following:

- P Take an oral antibiotic such as cephalexin (Keflex) 250mg every 12 hours during your procedure and for 5 days after your procedure.*
- P Clean the extraction sites daily with an antiseptic soap.*
- P Keep a clean bandage over the extraction sites for 3 days.*
- P Keep the extraction sites moist with a combination of antibiotic ointment such as Neosporin or Bacitracin and Hydrocortisone cream.*
- P Notify the office if the extraction sites become very red, tender, or drain pus.*
